Our Findings

No.	Vulnerability	Severity
1	Vulnerable & Outdated Components	Medium

Risk Assessment

Vulnerable & Outdated Components

Description

The website uses vulnerable and outdated javascript libraries, which could potentially pose a security risk to the organization.

Proof of Concept

axios@0.19.2

CVE-2020-28168

• Axios NPM package 0.21.0 contains a Server-Side Request Forgery (SSRF) vulnerability where an attacker is able to bypass a proxy by providing a URL that responds with a redirect to a restricted host or IP address.

CVE-2021-3749

• axios is vulnerable to Inefficient Regular Expression Complexity

Recommendations

It is recommended to update the javascript libraries to their latest fixed version.
